i-Step Foot Pressure Scanner and Orthotic Selector

iStep, is a revolutionary digital foot scanner manufactured by Aetrex. This patented scanner is powered by 3,744 gold plated barometric sensors that measure the pressure exerted by the foot every 0.25cm^2 . This high concentration of sensors results in unparalleled accuracy that allows it to pick up small pressure variations. The compact device also has 1,326 infrared LEDs and receptors aligned every half millimeter to ensure accuracy of foot size measurement.

The iStep measures the static pressures under the feet and immediately suggests appropriate insoles. A varied range of insoles are available to suit individual requirements and intended use.
